PAUL G. MEZEY
KEIJI MOROKUMA

JOE G. NORMAN, JR.
DAVID A. PENSAK

JOHN A. POPLE
ALBERTE PULLMAN

LEO RADOM
HAROLD A. SCHERAGA

ANDREW STREITWIESER, JR.
KENNETH B. WIBERG

A Wiley-Interscience Publication
John Wiley & Sons

Editorial Board:

Cornelis Altona, State University Leiden, The Netherlands
L. S. Bartell, University of Michigan, Ann Arbor, Michigan
Enrico Clementi, IBM Corporation, Poughkeepsie, New York
Rolf Gleiter, University of Heidelberg, Federal Republic of Germany
Warren J. Hehre, University of California, Irvine, California
Joyce J. Kaufman, Johns Hopkins University, Baltimore, Maryland
William A. Lester, Jr., Department of Chemistry, University of California, Berkeley, California
Max M. Marsh, Eli Lilly and Company, Indianapolis, Indiana
Paul G. Mezey, University of Saskatchewan, Saskatoon, Canada
Keiji Morokuma, Institute for Molecular Science, Myodaiji, Okazaki, Japan
Joe G. Norman, Jr., University of Washington, Seattle, Washington
David A. Pensak, E.I. duPont de Nemours and Company, Inc., Wilmington, Delaware
John A. Pople, Carnegie-Mellon University, Pittsburgh, Pennsylvania
Peter Pulay, University of Arkansas, Fayetteville, Arkansas
Alberte Pullman, Institut de Biologie Physico-Chimique, Paris, France
Leo Radom, Australian National University, Canberra, Australia
Harold A. Scheraga, Cornell University, Ithaca, New York
Andrew Streitwieser, Jr., University of California, Berkeley, California
Kenneth B. Wiberg, Yale University, New Haven, Connecticut

Editorial Production, John Wiley: Michele Marranzini

The *Journal of Computational Chemistry* (ISSN: 0192–8651) is published bimonthly, one volume per year, by John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158

Copyright © 1986 by John Wiley & Sons, Inc. All rights reserved. Reproduction or translation of any part of this work beyond that permitted by Sections 107 and 108 of the U.S. Copyright Law without the permission of the copyright owner is unlawful. Second-class postage paid at New York, NY, and at additional mailing offices.

The code and the copyright notice appearing at the bottom of the first page of an article in the journal indicate the copyright holder's consent that copies may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the United States Copyright Law. The per-copy fee for each item is $4.00 and is to be paid through the Copyright Clearance Center, Inc., 21 Congress St., Salem, MA 01970.

This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Such permission requests and other permission inquiries should be addressed to the Publisher, Wiley Journals.

Subscription price: $150.00 per volume. Postage and handling outside U.S.A.: $36.00 (surface mail); $158.00 (air mail). Back volumes, microfilm, and microfiche are available for previous years; request price list from Publisher. Please allow four weeks for processing a change of address.

Claims for undelivered copies will be accepted only after the following issue has been received. Please enclose a copy of the mailing label or cite your subscriber reference number in order to expedite handling. Missing copies will be supplied when losses have been sustained in transit and where reserve stocks permit.

Postmaster: Send address changes to *Journal of Computational Chemistry*, Subscription Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158.

Advertising: Inquiries concerning advertising should be forwarded to Dora Castiblanco, Advertising Sales, John Wiley & Sons, Periodicals Division, 605 Third Avenue, New York, New York 10158, (212) 692-6026.

Manuscripts should be submitted to one of the Editors, Dr. Norman L. Allinger, *Journal of Computational Chemistry*, Department of Chemistry, The University of Georgia, Athens, GA 30602; or Prof. Dr. Paul von R. Schleyer, *Journal of Computational Chemistry*, Institut für Organische Chemie, Universität Erlangen-Nurnberg, Henkestr. 42, D-8520, Erlangen, West Germany. *Information for contributors* appears in the first and last issue of each volume. *All other correspondence* should be addressed to the Publisher, Wiley Journals, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158.

The contents of this journal are indexed in the following: *Chemical Abstracts, Mathematical Reviews, Chemical Titles, Science Citation Index,* and *Current Contents/ Physical, Chemical, and Earth Sciences.*

Cyclopentenyl compounds, molecular mechanics calculations on, 302
Cyclopropyl radical, *ab initio* calculations on, 274

Data treatment, operational method, 229
Derivatives, effect of polarization functions on, 592
Diamminedichloroplatinum (II), 614
Difluoroethylenes, *ab initio* calculations on, 189
Dihydrofolate reductase, substrates and inhibitors, 377
Dimethylcyclohexanes, geometries of, *ab initio*, 570
Dimethylheptanes, conformational analysis of, 625
2,3-Dimethylnorbornadiene, 303
Disilane, pseudopotential calculations on, 469
Disilene, pseudopotential calculations on, 469
Dissociation energies of the first row element compounds, by *ab initio* calculations, 312
Distance matrix, 598
Docking, 432
—, in computer graphics, 432
Dodecamethylcyclohexane, molecular mechanics, calculations on, 401

Electron distribution, pictorial representation of, 209
Energy component analysis, 5
Enthalpies of formation, from *ab initio* calculations

Fluoroethane, effect of torsion on bond lengths, 331
Formaldehyde, *ab initio* calculations on, 13
Formamide, *ab initio* calculations, 46
Frame's method, 656
Franck–Condon factors for vibration–rotation for high levels, 360

Gold hydride, *ab initio* calculations on, 287
Gramicidin A, electrostatic potential of, 265
Graph, general tree of, 598
Graph orbits, 538
Graphs, all possible cycles in, 316
—, characteristic polynomials of, 656
Graphs and lattices, matching polynomials of, 122

Hammett σ constants, from MNDO calculations, 437
Hartree–Fock–Slater calculations, see *ab initio* calculations, 56
$H^+(CO)_3$, 119
Heats of formation, from *ab initio* calculations, 157
Helium atom, orbital relaxation in Rydberg series, 282
HOC procedures, 538, 552
Homeomorphically reduced graph, 316
2H-pyran-2-ones, 9
Hydrogen atom transfer reactions, *ab initio* calculations on, 486
Hydrogen bonded complex $[CH_3OH \cdot H \cdot NH_3]^+$, 581
Hydrogen isocyanate, reaction with water, 79

Imidazole, *ab initio* calculations on reaction with hydroxyl, 68
Integrals, repulsion, general expressions for monocenter, 343
ISHTAR, 610
Isopropyl radicals, *ab initio* calculations on, 274

King polynomials, of graphs, 447

Laplace transform inversion of thermal unimolecular rate constant, 455
Le Verrier-Faddeev's method, 656
Lumiflavin-β-carboline association, semiempirical approach, 441

Matching polynomials, of graphs and lattices, 122
Methylamine, *ab initio* calculations, 46
MINDO/3 calculations, hydrogen isocyanate with water, 79
MNDO calculations, 9, 108
—, of sigma values, 437
Molecular dynamics, parallel processing, 634
Molecular mechanics, charge calculations, 173
—, valinomycin, 148
Molecular mechanics calculations, methyl group attached to a conjugated system, 478
—, on cyclopentenyl compounds, 302
—, on dodecamethylcyclohexane, 401
—, on triethylamine, 249
Molecular-mechanics convergence, 1
Monopole expansions, 265
Monte Carlo simulations, 256
Morokuma component analysis, 5
MP2 calculations, 429
MRDCI calculations, perturbation theory corrections, 88

Neutral atom base interactions, 5
Ni_4, *ab initio* calculations on, 533
Nitric oxide, oxidation, 182
Nitrogen trioxide, *ab initio* calculations on, 182
NMR ^{31}P-^{31}P coupling constants, INDO calculations on, 647
Norbornadiene, 303
Normal coordinate calculations, on dimethylheptanes, 625

Pair potentials, for molecular association, 441
Parallel processing, for molecular dynamics simulations, 634
Partition coefficient, computing, 28
Peptides, molecular mechanics calculations on, 173
Permethylcyclohexane, dodecamethylcyclohexane, 401
PF_2NH_2, *ab initio* calculations, 46
Platinum complexes, MCD data on, 614
Polarization functions, effect on geometries of benzene derivatives, 592
Polynomials, characteristic, 656
Polynomials (king and color), of graphs, 447
Polypeptides, electrostatic properties of, 265
Post-Hartree–Fock calculations, 429
Post-Hartree–Fock methods, CI, 462
PRDDO approximations, systematic errors in, 652
PRDDO calculations, 108
—, on transition metal complexes, 142
Propionaldehyde, effect of torsion on bond lengths, 331
Proteins, electrostatic properties of, 265
Proton affinities, *ab initio* calculation of, 296
—, nitrogen and oxygen bases, 168
Proton transfer process, *ab initio* calculations on, 581
Pseudopotential calculations, on Si_2H_6 and Si_2H_4, 469
Pteridines, *ab initio* calculations on, 377

Quantitative Structure Activity Relationships, 492

Reaction between 2H-pyran-2-ones and organomagnesium compounds, 9
Reactivity of molecules, by atomic valences, 507
Receptor site, binding modes of a flexible ligand at, 350
Reequilibration, in solids, 514
Relativistic effective potentials, 287
Repulsion integrals, general expressions for monocenter, 343

Second-order many-body perturbation theory, 429
Semi-empirical calculations, 507
—, of P-P coupling constants, 647
—, on benzylic anions, 662
—, PRDDO, 652
Sigma constants, from MNDO calculations, 437
Silver hydride, *ab initio* calculations on, 287
Silylsilylene, pseudopotential calculations on, 469
Solids, reequilibrations in, 514
Solvated gramicidin A, effect of an applied voltage, 256
Solvent-effects, extended Born equation, 481
Spin-lattice relaxation, 610
Structure–activity correlations, 492
Structure–activity relationships, 28
Supercomputers, 200

Topological equivalence, 538
Triethylamine, molecular mechanics calculations on, 249

UMP2 calculations, 429
Unimolecular rate constant, Laplace transform inversion of thermal, 455

Valence, definitions of, 108
Valinomycin molecular mechanics, calculations on, 148
van der Waals molecules, Ar—H_2, 39
Vector processing, 201
Vibration–rotation Franck–Condon factors, 360

Wiener molecular branching, 598
